

The Wessington Springs School District provides some unique benefits for Cyber School students. By enrolling in our school you receive the online curriculum for free, use of a laptop (\$75 annual fee), and the district pays up to \$300 for all dual credit college courses, which usually covers the cost for any SD state funded post-secondary institution.

The courses offered are aligned to South Dakota content standards and are taught by qualified South Dakota teachers. All courses are approved by the South Dakota Department of Education, so you are assured that course offerings meet the state's high academic standards.

We offer the required math, English, science, and social studies courses with elective courses in health education, fine arts, world language, and career and technical education (CTE). The CTE courses prepare students to be college and career-ready through relevant learning opportunities. We also offer credit recovery classes as an effective solution for students who need to recover credits to be on track for graduation. Lesson level diagnostics in these courses allow students to move through material they have previously mastered.

Wessington Springs, as a leader in innovative education, provides an outstanding online school option for South Dakota students. The Wessington Springs Cyber School works in conjunction with DIAL Virtual School to provide a robust and rigorous curriculum.
